GA4 Analytics Report

Overall Performance

The website functions correctly and establishes a data collection system that operates with complete accuracy. The Garage Cafe has attract 138 active users during the last 28 days who together generated 2200 page views and 5400 total events. The cafe website shows strong user engagement because visitors spend an average of 3 minutes and 34 seconds on the site which exceeds typical time spent by users on local cafe websites.

Traffic Sources

Direct traffic generates 128 sessions which is followed by Organic Search with 97 sessions and Organic Social with 69 sessions and Referral with 12 sessions and Paid Search with 6 sessions. Facebook and Google serve as the primary sources of referral traffic. The site currently shows no results for discovery queries because almost all its organic search traffic comes from branded terms.

Top Pages

The Blog is the most visited part of the site at 578 views, making it the clear centerpiece of the web presence. The majority of website traffic originates from social media platforms because blog posts fail to attract any natural search traffic. The existing content effectively engages current followers but it still needs improvement to attract new visitors through Google search results. The blog will become a regular source of fresh visitors when we optimize its posts by targeting local discovery keywords which include "best coffee in Mabalacat," "cafe near Clark Pampanga," and "where to eat in Mabalacat."

Key Issue is Form Abandonment

56 users started a contact form but only 10 The contact form received 56 initial submissions yet only 10 users finished the process which resulted in a 17.9% completion rate. The site currently presents its largest loss of potential according to its present situation. This is the biggest missed opportunity on the site right now.

Recommendations

The blog content should concentrate on searchable topics which target local Mabalacat and Pampanga areas, to achieve organic growth. The Menu and Contact pages should receive internal links through blog posts, which will direct readers to those pages. The UTM parameters should be attached to all Facebook and Instagram post links, which will show the specific blog posts that generate website traffic. The contact form needs to be simplified, while a WhatsApp button should be implemented as a more accessible option, because only 10 out of 56 form attempts are being completed. The Admin Blog page should be excluded from GA tracking, because it currently increases the website traffic numbers.

5. Supporting YouTube / social analytics screenshots (if applicable)
