CAREER OBJECTIVE

A motivated 4th year Information Technology student specializing in Full-Stack / Frontend Development, seeking to experience opportunities to apply academic knowledge in a business environment. Proficient in Frontend Technologies, Backend Logic, up until deployment — in an academic setting, and is eager to learn how these skills are applied in real-world industry setting

ACADEMIC EXPERIENCE AND PROJECTS

Bachelor of Science in Information Technology - Specializing in Web Development

2023 – Present

- Developed responsive web applications beyond required coursework.
 - **Smart Parking System (HTML, CSS, PHP, JS)**
Developed a fully functional parking system with visuals to guide the driver as a side project during my 2nd year to solve traffic inside a parking area.
 - **Car Rental System (Angular JS, HTML, CSS, NoSQL)**
Developed a full-stack application that handles car rental on the front-side with a live simulation wherein the vehicles are simulated to be tracked. This application can be beneficial for businesses who rents cars to customers
 - **Clinic Inventory System (HTML, CSS, PHP, MySQL)**
Created a full-on inventory system for a clinic where they can track items being used, be reminded of any items that are almost out, and the history tracking of when and what items are being recorded to be used.
 - **Huan Coffee (HTML, CSS, Wordpress, SEO)**
Created a website for a coffee shop that involves creating it from scratch using wordpress then applying SEO for it to be noticed in the internet as a business worth visiting.
- Collaborated with and led team members in developing project-based applications.
- Participated in programming events involving building applications from scratch and debugging existing programs
 - Code to Death (2023)
 - Debuggathon (2024)
 - IT Quizbee Champion (2025)
- Earned programming-related certifications outside of formal coursework.
- Designed and developed web systems as independent side projects.
